WINDOW-PRO Digest for Thursday, February 10, 2011.

1. \*\*\*Official Sponsor\*\*\*Novaseal ShadeSealer Press Release

-----  
\*\*\*Official Sponsor of Window-Pro\*\*\*

Novaseal is officially the most frequent sponsor of Window-Pro. Thank you Novaseal and please check out their cool labor saving manufacturing equipment.

## PRESS RELEASE

Novaseal announces upgraded ShadeSealer for 2011.

Boca Raton, Florida, February 9, 2011: Novaseal, a US-based engineering design and manufacturing company known for their innovative Pulse-type sealing technology has announced that their ShadeSealer line of heat sealers has been upgraded for 2011. With these latest improvements, Novaseal's ShadeSealer may just be the best available heat sealer for sealing shades as well as drapery liners. (Picture at <http://img220.imageshack.us/img220/16/nscsloadedcallout.jpg>)

Upgraded improvements include:

- a) Automatic PocketMaker is now standard on all ShadeSealers. With Novaseal's MicroPrecision feature, their Automatic PocketMaker will now provide  $\pm 1/64$ " (0.015) variation over a 168-inch sealing length. That represents a significant improvement over their European competitor (ASCO).
- b) Risers are now standard on all ShadeSealers. Risers replace lasers for better alignment, and they also provide fixturing for splines and zippers. With this improvement, all ShadeSealers can be used to seal splines, zippers, keders, etc.
- c) Improved Rocker maintenance. All machines include infinite control adjustability with a ratcheted system for maintaining tension on heating elements. Machines are easier to maintain than ever before.
- d) Several other improvements including MagPlates on all accessible surfaces, easier pocket depth adjustments, improved TableStop, etc. Novaseal has even announced improvements to their popular EndSealer! (Picture: <http://img718.imageshack.us/img718/3086/ansces4051.jpg>)

When compared to alternative heat sealing methods, Novaseal's Pulse sealing technology continues to outperform Impulse sealing, RF and Hot Air methods for production and quality assurance ... with Pulse, window pros get better seals faster.

As the economy improves (Dow increasing) creating more hope that tomorrow will continue to improve, there seems to be more interest in buying quality, value-based American manufactured machinery. And since Novaseal ShadeSealer is rapidly becoming the "best of the best – best value, best quality" there's probably no better time than today to buy or lease a ShadeSealer.
